

Small battery. Big fire risk.

Batteries need their own collection

Keep loose batteries out of general waste and ordinary recycling bins. Use your workplace battery collection point.

Check for hidden batteries

Phones, laptops and many small electricals contain batteries. Keep these items in electrical recycling. Do not force out a battery that is built into a device.

Damaged batteries need extra care

Some batteries can catch fire when damaged. Report swollen, leaking or damaged batteries and ask for specialist advice before storing or collecting them.

Recycle today. A cleaner tomorrow.
